

#Jenny

Finally I get this ebook, thanks for all these I can get now!

#Rio

Cool! I'am really happy

#Markus Jensen

I did not think that this would work, my best friend showed me this website, and it does! I get my most wanted eBook

#Hun Tsu

wtf this great ebook for free?!

#Che Salsa

My friends are so mad that they do not know how I have all the high quality ebook which they do not!

#Diego Butler

so many fake sites. this is the first one which worked! Many thanks

Double Replacement Reaction Lab 27 Answers Book

Lab: Single and Double Replacement Reactions

Purpose: To predict products and elaborate various single and double replacement reactions.

Hypothesis: Single Replacement Reaction: Use the activity series to predict and your understanding of single replacement reactions to predict products for the following reactions. If no reaction will occur, then write "no rxn" on the product side of the equation.

1) $\text{HCl} + \text{Mg} \rightarrow$ _____
2) $\text{HCl} + \text{Cu} \rightarrow$ _____ (from upper reactant of a metal-metal)
3) $\text{HCl} + \text{Fe} \rightarrow$ _____ (from overall rxn for the compound)
4) $\text{HCl} + \text{Zn} \rightarrow$ _____

Hypothesis: Double Replacement Reaction: Use the solubility chart and your understanding of double replacement reactions to predict products for the following reactions. If none of the products precipitate or gas, then write "no rxn" on the product side of the equation. Otherwise, identify which product will be a precipitate and which will form a gaseous product.

1) $\text{NaCl(aq)} + \text{Cu(NO}_3)_2(\text{aq}) \rightarrow$ _____
2) $\text{NaCl(aq)} + \text{Fe(NO}_3)_3(\text{aq}) \rightarrow$ _____
3) $\text{NaCl(aq)} + \text{AgNO}_3(\text{aq}) \rightarrow$ _____
4) $\text{AgNO}_3(\text{aq)} + \text{Zn(NO}_3)_2(\text{aq}) \rightarrow$ _____

Procedure:

- For each single replacement reaction, place a sample of each metal in your well plate and then place 5-8 drops of HCl on top of it. Record your observations.
- For each double replacement reaction, place two drops of each solution carefully on the "microplate," covering each "X" appropriately over your "Super High-Tech Protected Reaction Surface." Record your observations.
- If a precipitate formed, check with the formula for the precipitate on the line provided.
- Clean up your workstation according to your instructor's directions and answer all questions.

Observation/Date:

	HCl (aq)
Mg	1. observation
Cu	2. observation
Fe	3. observation
Zn	4. observation
